airconnect app
INFORMATION SHEET

The **Airconnect Database** is a **mobile optimized information sharing app** for supervisors and staff to **efficiently manage air-conditioning maintenance**. It was designed by our refrigeration mechanics to optimize their daily functions. A demonstration page can be found here: airconnectdemo.airconstruct.com.au.
The default user has "Staff" level of access.

It allows for managers to be **notified immediately** of important events and required actions, eliminating the need for phone calls. This in turn improves productivity and efficiency.

It allows staff to see a work history of any air conditioner that they are working on. This speeds up diagnosis of issues as well as the repairs. It also shows all relevant information on a unit in the palm of their hand.

The Airconnect Database has three levels of access, with relevant privileges based on necessity:

Clients can log in and search for a particular unit, see all relevant units and see the work history for any unit.

Staff have additional access to clients in that they can also edit/add units, add parts, edit/add details, complete checklists and enter work reports.

Managers have extensive access with the added ability to create/view/edit/delete users, delete units and delete reports.
